

THE WATCH

Believe in the Badge - production preflight

The composition has enough direction to define a physical target. The current raster master does not yet have enough source resolution to make a premium large-format edition honestly.

PRODUCTION GATE

Current backdrop source: 1536 x 1024 px. At a 36 x 24 inch target, that is only 42.7 pixels per inch before any compositing or crop. The room mockups prove scale and direction, not printable detail. A higher-resolution master is required before a physical sample is ordered.

Working physical targets

Direction	Working trim	Reason
Floating metal	36 x 24 in	Enough architectural presence for a briefing room while preserving the 3:2 composition.
Archival paper + frame	30 x 20 in	Quieter reading-led presentation with room for mat and substantial frame proportion.

Master artwork requirement

For a 36 x 24 inch premium print, use a photographic master of at least 5400 x 3600 pixels (150 ppi at final size); 7200 x 4800 pixels or higher is preferred when the source supports it. Keep typography and linework vector wherever possible. Do not upscale the current 1536 x 1024 backdrop and call the result production-ready.

Working preflight geometry

Maintain the existing 3:2 aspect ratio. Use a working 0.25 inch bleed outside trim and keep critical text at least 0.75 inch inside trim until a production partner supplies an exact template. Vendor specifications override these generic working values.

Physical sample checklist

The sample is successful only if the material makes the writing easier to live with, not merely more expensive.

- [] Read the full piece comfortably from roughly 3-5 feet.
- [] Recognize the title and overall composition across the room without needing to read every line.
- [] Confirm deep blacks retain detail rather than collapsing into a glossy dark mass.
- [] Check reflection under overhead office lighting and oblique side light.
- [] Judge the flag and officers as supporting imagery, not as a recruitment-poster focal point.
- [] Inspect edge treatment and wall separation from the side.
- [] Compare metal and framed paper in the same room before choosing a primary edition.
- [] Confirm the final output uses a high-resolution, rights-cleared master.

Do not order the sample yet

The composition can continue to be refined at screen scale, but the next honest physical step begins with a higher-resolution master image. Until then, the edition remains in production preflight.
